

Aqua-Hot®

HYDRONIC HEATING SYSTEM

450-DE

Stay Warm and Comfortable
wherever your travels take you!

Enjoy the luxury of quiet, continuous warmth in your motorhome.

The Aqua-Hot 450-D is our smaller system and was designed for motorhomes with less ample bay space. Equipped with features similar to the Aqua-Hot 600-D, this powerful, compact heating system will provide you with a continuous supply of hot water and quiet, uniform interior heat.

The Ultimate in Warmth and Comfort!

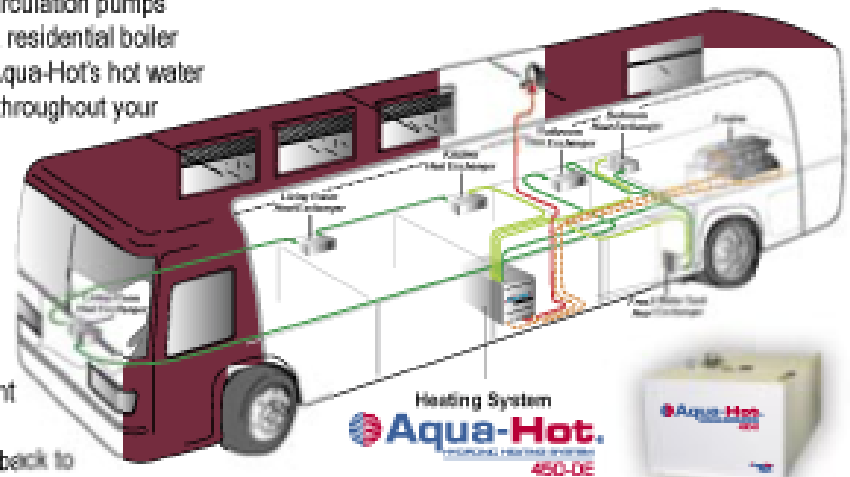

How does our system work?

Call Us at (800) 685-4298 or (303) 659-8221

Interior Heat: The Aqua-Hot is equipped with multiple circulation pumps which allow for independent interior heating zones. Similar to a residential boiler system, whenever interior room thermostats call for heat, the Aqua-Hot's hot water solution is circulated through interior heat exchangers located throughout your motorhome.

Hot Water: A continuous supply of hot water is achieved through our tankless, on-demand hot water system which eliminates the need for hot water storage. Water is simply heated as it is being used.

Engine Preheat/Motoraide: Your engine's coolant is heated prior to starting in cooler climates. This same system also makes good use of the engine's heat by transferring heat back to the Aqua-Hot while driving down the road.

Features:

- **Tankless, On-Demand Hot Water System**

Hot water is heated on demand as it is being used; no need for a separate water heater.

- **Maintain Comfort Zones Separately**

Independently control interior temperatures in up to five separate heating areas.

- **Quiet, Uniform Interior Heat Distribution**

Our heat exchangers gently disperse heat quietly and evenly providing draft-free heating; no hot and cold air pockets.

- **Electric Heating**

(1) 1650 Watt, 120 Volt AC powered heating element can provide heat and domestic hot water during low demand periods.

- **Unique/Efficient Design**

Utilizes on-board diesel fuel; no need for propane to supply heat or hot water. Low diesel fuel usage.

- **Maximize Valuable Space**

Combines domestic hot water and interior heating in one unit. Compact size frees up more storage space.

- **Safety Features**

Automatic shut-down in case of low voltage or an overheat situation. Burns low-volatility diesel fuel.
