PROPER INSTALLATION OF DOMETIC ROOF
AC GASKET WITH CROSS OVER.

YEAR / BRAND / TYPE / MODEL #

This information is for all Newmar motorized and towable units with Dometic roof air conditioners installed.

PRODUCT INFORMATION

It is very important to know that when replacing a Dometic roof A/C unit, **you must install all new gaskets**. These gaskets are not provided with the replacement roof AC and will need to be ordered separately.

Installing the 14"X14" outer foam gasket on the bottom side of the new roof a/c unit.

Installing the foam cross over gasket over the center of the blower, angling ½" to the right edge of the return port.

Complete installation of the cross over gasket that is ***mandatory*** to separate exhaust and return air

Both gaskets properly installed on the bottom of the new roof a/c unit. Ready to secure the a/c unit to the roof.

OTHER INSTALLATION TIPS TO REMEMBER

- Each air conditioner is secured with four lag bolts that run into a backer installed in the roof.
- The mounting bolts should be tightened to 60 inch pounds.
- The top of each mounting bolt should be covered with silicone.
