

Comfortaire®

2008 R.V. Mattress **Catalog**

Sleep on **Air**

RV.500

Mattress Cover:

72.8% rayon / 27.2% polyester fabric, quilted to 1/4" base foam, and 2" of 1.7 oz. fiber.

Foam Perimeter Support:

1.6 density foam with fabric covers and Velcro fasteners.
(8" high)

Topper Foam:

2.15 density, anatomically zoned, convoluted comfort pad. Visco upgrade available.

Air Cores:

6", 24 gauge latex/cotton air cores.

Air Control System:

Patented Whisperflo® air control system with 100 digitally controlled settings, memory, and instant inflate.

A History of Innovation

Comfortaire® introduced our basic air bed design over 27 years ago and today it remains the industry standard. The original design focus was on an independently adjustable surface by utilizing latex-cotton air chambers. While this design is functionally adequate and was adopted by our competitors, it does leave room for improvement. With this design the air chambers can be over-deflated which results in the loss of support critical to proper postural alignment.

Our mission is to provide innovative sleep solutions so rather than maintaining the industry standard, we did what we do best... innovated.

We innovated an air control system which provides true individual sleep solutions.

- **100 individual Comfort Settings**
- **Individual One Touch Memory**
- **One Touch Instant Fill**

We innovated an air chamber that overcomes the inherent issues of the industry standard latex-cotton chamber.

- **Proprietary urethane alloy construction**
- **Low Profile**
- **Anti-Fungal**
- **Anti-Microbial**
- **Flame Suppressant**
- **No offensive odor**
- **Wicks moisture**
- **Precision manufacturing**

We innovated a new Box-Top Aire™ mattress by placing the air in the surface of the mattress where it gently cushions each unique body shape and provides proper postural alignment. Our design is elegant, yet simple.

- **The support critical to proper postural alignment comes from our special base foams.**
- **The low profile air chamber provides posturization for proper spinal alignment.**
- **The topper pad and cover provide premium comfort.**

Comfortaire's original product designs have been the benchmark for the air mattress industry for over 27 years. Our commitment to our mission and to sleep research assures you that the products we sell are designed to meet the individual sleep needs of our ultimate customer.

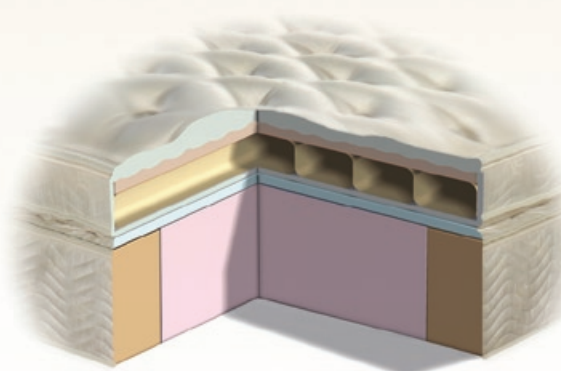

1981

Our Original Air Bed.

2008

Comfortaire® redefines air sleep with the patented "Edge to Edge™" design.

Whisperflo® Air System

Hand Control

Features	Benefits
1. Ergonomic Styling (H/C)	Hand control is easy to manipulate with one hand.
2. Low Voltage Remotes (H/C)	Safety. Low voltage in hand control insures safe operation.
3. Replaceable Hand Control Cord	Easily replaced hand controls and cord.
4. Instant Inflate	Inflate the mattress to full anytime with the push of one button.
5. LED/LCD	With 100 unique settings on each side of the mattress, you never have to guess what the pressure is.
6. Dual Zone Support Readout	Customize support on each side of the mattress
7. Memory	Feel the exact same settings night after night.
8. Two Modes of Operation	Control each side of the mattress independently or change modes and control both sides of the mattress simultaneously.

Base Unit

Features	Benefits
1. UL Listed	Tested and safety insured.
2. Ball Bearing Motor	You are able to control motor speeds. Variable speed allows you to hit exact firmness and improve inflation rates.
3. Reverse Seated Valve	Improves air retention. Your body weight actually helps to seal air in the mattress. Improved flow allows 1.5 minutes for full inflation.
4. Surge Protection Built in Fusing	Replaceable fuse keeps surges from destroying electronics.
5. Barbed Fittings	Eliminates air leakage around fittings.
6. Replaceable Power Cord	If something happens to the cord simply buy a new one at any local store.
7. Air Filtration	Keeps the valve clean and seating well.
8. Heat Reductions	Variable speed ball bearing motor and valve design reduce heat within the unit, extending the life of the pump.
9. Fuzzy Logic	This system will actually find your favorite firmness quicker as it profiles your body.
10. Pressure Sensitive Chip	The system will break your body weight into 100 possible feels of firmnesses. This allows complete repeatability.
11. Universal Power Supply	Operates from 110v to 220v.

WhisperFlo® Air Control System

With 100 Digital Comfort Settings™, One Touch Memory and Instant Fill, you are in total control of your individual sleep needs.

The heart of each Comfortaire mattress is the Comfort Control™. The air control system allows you to adjust the mattress to your individual Comfort Setting™ while preserving the Comfort Settings of your sleep partner. Each air control system has two wired remote hand controls so that you your Comfort Control™ is right at your fingertips. If you have a twin size mattress, your air control system will only have one wired remote hand control. In the "Comfort Control" section of this catalogue you can review the exact specifications for each of our air control systems.

The patented design of the Whisperflo® unit allows you to choose from 100 different firmnesses, enabling you to find just the right fit for you. Not only will you be able to find that very specific fit, but you will also

be able to store that exact firmness in memory - returning to your favorite feel at any time. Our patented Whisperflo® system takes the guesswork out of a variable firmness mattress. We have also added a 100% inflated feature. This will allow you, at the push of a button, to return the mattress to 100% inflated, resulting in a great look for making your morning mattress. Remember, when you return at night for bed, simply crawling into bed and touching your memory button will return you to that fit you enjoy.

We have also taken great care in designing this unit to maximize durability. Our Whisperflo® unit utilizes a ball bearing, variable speed motor that not only allows us to precisely control motor speed - getting you to your exact firmness, but will truly last a lifetime. Also, we have designed a unique air sealing valve that will increase the ability to maintain your air level over long periods of time. In fact, the valve is designed to use your body weight in helping to seal the system. That's right, increased weight guarantees a great seal. Also, we have included several modes of operating our new unit. The primary modes are manual and pressure sensitive. The manual mode operates similar to our standard unit by pushing the plus and minus button. The system then responds by firming or softening the mattress. When your finger is removed from the key pad, the unit briefly displays the pressure setting that you're at for future reference. Memory and Instant Inflate are new features of this mode. The second mode allows you to control your firmness by scrolling through 100 firmness settings. Any one of these settings can be stored for each side of your mattress. Again, memory and 100% inflate will operate in this mode as well.
