DESCRIPTION OF PROBLEM																			
<p>A 6 volt cable connecting two sets of batteries in two different compartments was inadvertently left out during production.</p>																			
RECOMMENDED SOLUTION																			
<p>Install and secure a 4' long 3/0 gauge cable between the two banks of batteries per the attached procedure. Please contact your Newmar Technical Support Representative if you should have questions on this procedure.</p> <p>Labor Time: .3</p> <p>Labor Code: TSB332</p>																			

## TSB 332 Wire Procedure

On a 2008 "All Electric" Essex, open both battery compartments and extend the trays completely for inspection. Confirm the cable linking the 6VDC side of the two battery banks together was installed.

The cable in question is installed between the right rear battery in the main bank and the rear battery in the second bank of batteries. Secure it with tie straps so it does not drop onto exhaust components.

If this cable is missing, install the following:

- 1) Approximately 4' of 3/0 cable (Newmar part # 51829)
- 2) Approximately 4' of black conduit to cover the cable (Newmar part # 35270)
- 3) 2 – Crimp on terminal end rings (Newmar part # 22404)
