

# WFRCONTROL PAIRING

## Setting Up WFRControl

### WHAT IS WFRCONTROL?

WFRControl is the feature that allows a master WiFiRanger to manage and control a secondary WiFiRanger. This is used in packs that generally include both indoor and outdoor routers. It is preferable to Scan and Join using the outdoor router which is generally the slave. This can be done conveniently from the master's Control Panel once WFRControl is properly setup.

*Examples of packages that use WFRControl*

**Marine Pack** - Go (master) & Marine (slave)

**RV Pack** - Go (master) & Mobile (slave)

**RV Pack<sup>2</sup>** - Go<sup>2</sup> (master) & Sky (slave)

**RV Pack<sup>Ti</sup>** - Go<sup>2</sup> (master) & Mobile<sup>Ti</sup> (slave)

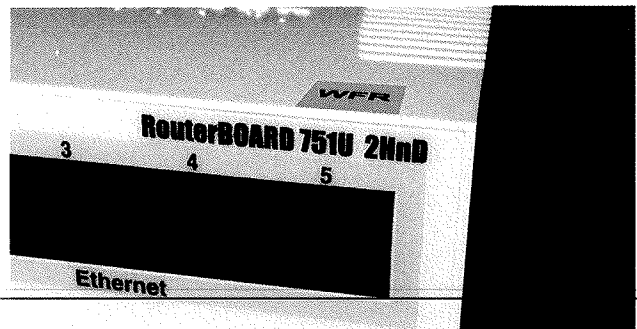

**IR Pack** - IR (master) & Sky (slave)

**IR Pack<sup>2</sup>** - IR<sup>2</sup> (master) & Sky (slave)

### STEP 1

Power both units and wait a couple minutes

PLUG POWER INTO MASTER AND PLUG SLAVE INTO MASTER'S 5TH PORT IN MOST CASES

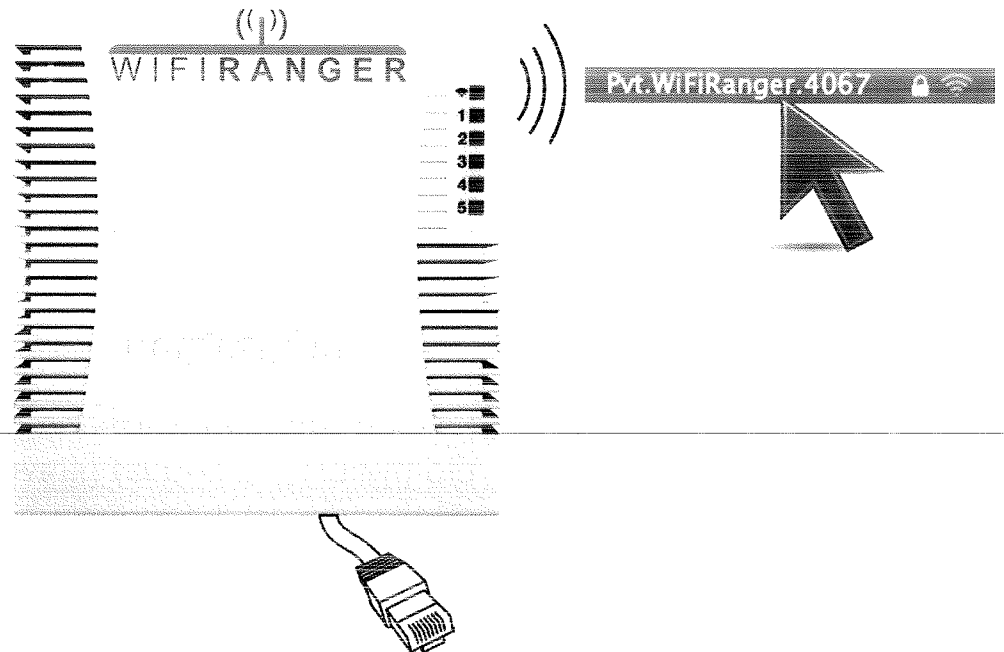

Intelligent WiFi Routers™

## STEP 2

Connect to master via LAN or WiFi

THE MASTER MUST BE USED FIRST TO SETUP WFRCONTROL

## STEP 3

Go to the master's Control Panel in web browser

USE CONTROL PANEL ADDRESS FROM INCLUDED DOCUMENTATION OR CREATE THE ADDRESS BY DEDUCING IT FROM THE MASTER'S ID NUMBER BASED ON THE FORMAT 77XXYY TO 10.1XX.YY.1:8080

FOR EXAMPLE: 774067  
10.140.67.1:8080

## STEP 4

Go to the master's Setup tab

REMEMBER THAT WFRCONTROL MUST BE SETUP FROM THE MASTER TO THE SLAVE

## STEP 4

Check WFRControl as Active

SKIP TO NEXT STEP IF WFRCONTROL IS ALREADY ACTIVE

WFRControl

## STEP 5

Expand WFRControl Settings

THE GEAR ICON FOR SETTINGS CANNOT EXPAND UNLESS WFRCONTROL IS ALREADY ACTIVE

WFRControl

## STEP 6

Select Ethernet or WiFi for Control Over

ETHERNET IF SLAVE IS HARDWIRED TO MASTER AND WiFi IF SLAVE POWERED INDEPENDENTLY

### STEP 6.2 (ONLY IF WiFi WAS SELECTED)

Select slave WiFiRanger from Controlled WiFiRanger SSID list

LIST SHOWS ALL NETWORKS IN RANGE OF MASTER AND CAN BE REFRESHED WITH SCAN BUTTON

### STEP 6.3 (ONLY IF WiFi WAS SELECTED)

Enter password of slave in Controlled WiFiRanger WPA key field

## STEP 7

Click Save at bottom left of Setup tab

IT MAY TAKE UP TO A MINUTE FOR WFRCONTROL TO CONFIGURE

**WFRControl Status**  
**Configured**  
Controlling 772489 over Ethernet

## STEP 8

Go to the master's Main tab

PROCEED ONLY IF SLAVE IS CONTROLLED BY MASTER AND READY FOR ACTION OR TROUBLESHOOT WFRCONTROL USING APPENDIX IF CONFIGURATION AFTER STEP 7 FAILS

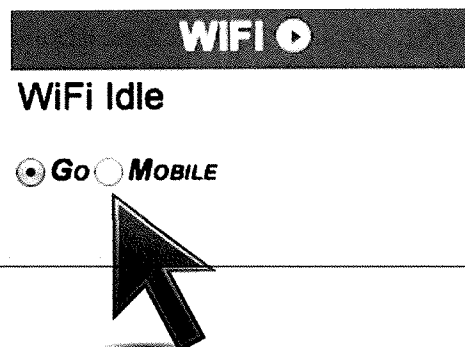

## STEP 9

Select slave rather than master in WiFi box

TOGGLE BETWEEN THE MASTER (LEFT) AND SLAVE (RIGHT) TO SCAN AND JOIN USING THE SELECTED ROUTER'S WIRELESS RADIO AND CAPABILITIES

GENERALLY, THE SLAVE SHOULD ALWAYS BE SELECTED AS THE OUTDOOR UNIT PROVIDES MORE WIFI RANGE AND PERFORMANCE

**Intelligent WiFi Routers™**

## OPTIONAL STEP 10 (RECOMMENDED)

Go to the master's Setup tab and move WFRControl up in Order

IT IS RECOMMENDED TO HAVE WFRCONTROL HIGHER IN PRIORITY THAN INTERNAL WiFi

Order	Device	Swap Connection ?	Standby ?	Active	Settings
1	Ethernet WAN	to Nothing		<input checked="" type="checkbox"/>	
2	Internal WiFi	to Nothing		<input checked="" type="checkbox"/>	
3	Cellular	to Nothing		<input checked="" type="checkbox"/>	
4	WFRControl	to Nothing		<input checked="" type="checkbox"/>	

## CONCLUSION

Now you have the simple, unified control of two WiFiRangers from the Control Panel of the master. WFRControl also combines the networks of both WiFiRangers, meaning devices connected via LAN or WiFi to *either* unit will be interconnected at all times. WFRControl makes the most of both indoor (master) and outdoor (slave) capabilities.

### *Advantages of WFRControl*

- **Controlling Slave**
- **Combined Network**
- **Indoor/Outdoor Capabilities**

**Intelligent WiFi Routers™**

## **TROUBLESHOOTING APPENDIX**

*Follow these instructions if the above Steps did not work*

### **TROUBLESHOOT 1**

Verify both WiFiRangers are on matching firmware (required to work)

FIRMWARE VERSION IS FOUND ON TOP RIGHTHAND CORNER OF CONTROL PANEL AND UPDATE LINK IS FOUND IN THE SAME AREA SHOULD THE UNITS REQUIRE AN UPDATE FOR WFRCONTROL

### **TROUBLESHOOT 2**

Reset both WiFiRangers to Factory Default Settings on Setup tab

CONNECT TO MASTER AND SLAVE TO INDIVIDUALLY TO RESET EACH THEN REBOOT ONCE DONE

### **TROUBLESHOOT 3**

Ensure there is no confusion between master and slave

IN SOME CASES, JUST TAKE SOME TIME TO THINK THROUGH A STEP, KEEPING IN MIND WHICH UNIT YOU'RE CURRENTLY CONNECTED TO AND FOLLOW EACH STEP WHILE CLOSELY DISTINGUISHING BETWEEN MASTER AND SLAVE

### **TROUBLESHOOT 4**

Contact a WiFiRanger support representative

## POWERING

### POWERING OUTDOOR ROUTER

1 Plug Sky's ethernet cable into WFR port

ENSURE SKY IS PLUGGED IN BEFORE POWERING UP (KEEPS WFRCONTROL SYNCED)

2 Power Go or Universal POE using **110V AC** or **12V Battery** power

#### 110V AC

Plug 12V output AC adapter into DC power port

#### 12V Battery

Connect **red** wire to positive and **black** to ground

#### RV PACK² TIP

The WiFiRanger Go and Sky are made to pair together using the WFRControl feature. This allows for seamless control and interconnecting of both units. WFRControl is configured on the WiFiRanger Go's Control Panel so that you can Scan then Join a WiFi Network using the Mobile.

The RV Pack² also allows for a clean installation, with the Sky receiving power from the Go.

# WIFIRANGER

## WiFiRANGER Go<sup>2</sup>

Indoor router made for travel and powering outdoor WiFiRangers. The WiFiRanger Go<sup>2</sup> is enhanced from the original Go design, including improvements in processor power, wireless range, and visual indicators. These renovations provide for better USB Cellular support and dependable WFRControl powering. One visual distinction is the red port 5 LED which indicates that LAN port 5 is hot and ready to power a Power Over Ethernet device.

### SPECIFICATIONS

BAND	2.4GHz	LAN	4x (10/100)
ANTENNA	INTEGRATED 2X2 MIMO	WAN	1x (10/100)
THROUGHPUT	UP TO 300MBPS	USB	1X (AUTOMATIC CYCLING)
STANDARDS	802.11 B / G / N	DIMENSIONS	113x138x29MM
BROADCASTS	1x PRIVATE / 1x PUBLIC	TEMPERATURES	-20C ~ +50C
ENCRYPTION	WPA2 PERSONAL 256BIT	POWER IN / OUT	8-30VDC / POE PORT 5
