

# Storage Door Replacement

## How to Remove Old Style Storage Doors

- Step 1. Remove the door struts.
- Step 2. Remove pop rivets or clips from either side of door.
- Step 3. A. Open the storage door to at least a 60° angle.  
B. Push and hit the bottom edge with your hand or gently with a rubber mallet.  
C. Work the door back and forth until it pops out of the hinge.
- NOTE: IT IS EASIER TO LOOSEN THE DOOR RAIL AND SLIDE THE DOORS IN, BUT THE METAL SCREW COVER WILL BE DAMAGED AND WILL NEED TO BE REPLACED.
- Step 4. Spray the hinge with a lubricant, such as SLICK, before re-installing the door.
- Step 5. Place the door at the same angle, by hitting and pulling on the rear top edge of the door until the door pops into place.
- NOTE: DO NOT USE TOO MUCH FORCE, AS THE RAILS CAN BEND AND THIS MAY CAUSE THE DOOR TO SNAP AS IT OPENS.
- Step 6. Reinstall pop rivets or clips on hinge rail.
- NOTE: NEW CLIPS CAN BE MADE OUT OF THE TOP DOOR RAIL IF DIFFERENT SIZES ARE NEEDED.
- Step 7. Reinstall door struts.

## How to Remove New Style Storage Doors

- Step 1. Remove door struts.
- Step 2. Remove the screws on the both sides of the storage door.
- Step 3. Remove door.
- Step 4. Install new door with screws to hinges.
- Step 5. Install door struts.
