DESCRIPTION OF PROBLEM							
Ride height on Spartan independent front suspension.							
RECOMMENDED SOLUTION							
<p>The ride height on Spartan independent front suspension units should be set between 16" and 16 1/4". This measurement is taken from the centerline to the centerline of the shock mounting bolts. Newmar currently sets it at 3/16". If you have customers who complain of front axle ride quality on the IFS, check and adjust the ride height according to the above parameters.</p> <p>The rear axle ride height will remain at 8 1/2" measured from the bottom of the chassis rail to the centerline of the axle. If you have any questions, please contact your Newmar warranty representative.</p>
