Description of Problem

Insufficient return air ducts in the kitchen area. This will pertain to 35 LKSA models only that were shipped up to August 24, 2001.

Recommended Solution

Remove the forward end panel from the soffit area and install a board 18" back from the front edge. Next, seal off the perimeter of the soffit area around the board. Install two 4" louvered vents and cut 6" X 6" access to return air duct through the ceiling board. Tape the edges to seal from the duct to the opening in the soffit cavity. Install filter material over the 6" X 6" opening and re-install the end panel. When you are finished, test the system. This should pull return air into the cavity. Please use the attached diagram as a reference.

If you have any questions regarding this T.S.B., please contact a Warranty Service Representative at Newmar Corporation.

4" round vent.

6" X 6" opening.

Board to block off soffit opening.
