DESCRIPTION OF PROBLEM											
Poor picture on Sony plasma television.											
RECOMMENDED SOLUTION											
A poor quality picture on the Sony plasma television could be caused by the video input cable being installed in the video output on the back of the television. To insure the television is hooked up properly, start a DVD movie then press the DVD stop button. A sky scene will be displayed on the television. This scene is output by the DVD player. A properly connected television will display a scene where there is an obvious distinction between the clouds and the sky. An improperly connected television will display a scene that blends the clouds and the sky together and everything looks the same.
